This exam consists of 10 questions (25 pages including this page) worth a total of 180 marks (which will be scaled to 100%). It is an open book exam, course notes and any MatLab book(s) are allowed. No laptops or cell phones are allowed. All answers are to be written in this booklet. Scrap work may be done on the back of each page; this will not be marked. The exam is 180 minutes long (3 hours) and comprises 35% of your final mark. Should your final exam grade be higher than your midterm exam grade (worth 20% of your final grade), your final exam grade in this course will count for the full 55% of your exam grade.

Please print you full name and student number in the space provided below before you start this exam.

Question 1 (20%) Choose one answer for each question.

1. (1 mark) MatLab stands for Mathematics Laboratory and was invented by the Russians in the 1960’s during their space race with the Americans.
   (a) true
   (b) false

2. (1 mark) The transpose of Matrices A*B is A’*B’, where ′ is the MatLab transpose operator.
   (a) true
   (b) false

3. (1 mark) For the systems of equations A*x=B, both x=A\B and x’=B’/A’ (where ′ is the MatLab transpose operator) give the same numerical solutions.
   (a) true
   (b) false

4. (1 mark) For the $2 \times 2$ matrix $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$, $A(;)$ yields 1, 2, 3 and 4.
   (a) true
   (b) false

5. (1 mark) For $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$, $A = \text{reshape}(A, 2, 2)$ yields $A = \begin{bmatrix} 1 & 3 \\ 2 & 4 \end{bmatrix}$.
   (a) true
   (b) false

6. (1 mark) Least Squares means having more unknowns than equations.
   (a) true
   (b) false
7. (1 mark) Handle graphics allows us to change the appearance of plots that were plotted earlier if the handles for those plots are known.
   (a) true
   (b) false

8. (1 mark) For GUIs in MatLab, *.fig files give the layout of the GUI.
   (a) true
   (b) false

9. (1 mark) Multi-core solutions always run faster than single core solutions.
   (a) true
   (b) false

10. (1 mark) A GPU (Graphics Processing Unit) with compute capacity $\geq 1.0$ can do floating point arithmetic.
    (a) true
    (b) false

11. (1 mark) Symbolic integration means MatLab may be able to compute the indefinite integral of a function symbolically.
    (a) true
    (b) false

12. (1 mark) Symbolic integration means MatLab may be able to compute the definite integral of a function numerically.
    (a) true
    (b) false

13. (1 mark) \texttt{randn(1000,1)} yields a 1000 component column vector of random numbers having a standard deviation of approximately $\sigma = 1$ and means of approximately $\mu = 0.0$.
    (a) true
    (b) false
14. (1 mark) Kurtosis is a measure of the symmetry in a distribution of numbers.
   (a) true
   (b) false

15. (1 mark) MatLab function `polyval` does a least squares fit of the polynomial coefficients of order $n$ to data of size $\geq n + 1$.
   (a) true
   (b) false

16. (1 mark) An edgel is a pixel representing an intensity discontinuity at that pixel.
   (a) true
   (b) false

17. (1 mark) MatLab 2013b can run all its edge detectors on the GPU.
   (a) true
   (b) false

18. (1 mark) Histogram equalization is a form of contrast enhancement on images.
   (a) true
   (b) false

19. (1 mark) The edge maps of the 3 colour planes of a colour image are identical.
   (a) true
   (b) false

20. (1 mark) Any calculation on a variable with a `nan` value yields a `nan` value.
   (a) true
   (b) false
(2) (15%) Consider the evaluation of the polynomial:

\[ f(x, y) = x^6y + y^6x + x^3y + y^3x. \]

Give the most efficient vectorized solution for the polynomial when:

\[
\begin{align*}
x &= \text{linspace}(0, 1, 100000); \\
y &= \text{linspace}(1, 0, 100000);
\end{align*}
\]

Efficiency is judged by the number of multiplications required.
(3) (20 marks) Consider the following system of equations:

\[
\begin{align*}
5x + 6y + 7z &= 8 \\
7x + 6y + 5z &= 3 \\
9x + 7y + 3z &= 10 \\
14x + 15y + 16z &= 30 \\
16x + 15y + 14z &= 28 \\
9x + 3y + 27z &= 30 \\
\end{align*}
\]

1. (8 marks) Set up the matrices for this system of equation as \(A\mathbf{s} = \mathbf{B}\).

\[
A = \begin{bmatrix}
\end{bmatrix},
\]

\[
B = \begin{bmatrix}
\end{bmatrix},
\]

and

\[
s = \begin{bmatrix}
\end{bmatrix}.
\]
2. (3 marks) What is the best MatLab solution for $s$ using least squares?

3. (3 marks) The “least squares integration matrix”, $A$, is not a square matrix in the equation $A \ast s = B$. Rewrite this equation with a new “least squares integration matrix” that is made square by multiplying both $A$ and $B$ by a certain matrix (that is derived from matrix $A$).

4. (3 marks) Solve this system of equations using the inverse of the new least squares integration matrix.

5. (3 marks) Do you expect the exact same solution for all systems of equations using $A \backslash B$ or your inverse solution in 4. Why or why not?
4. (25 marks) Consider the following 2D graphs and the incomplete MatLab code used to generate them. Fill in the single missing MatLab statement (after the `figure` statement) in each case.

1. (5 marks) Suppose we plot the following figure using the incomplete MatLab code below.

```
x=linspace(0,10,11);
y1=[0.1 0.2 0.3 0.2 0.1 0.0 -0.1 -0.2 -0.3 -0.2 -0.1];
y2=[0.0 0.5 1.0 1.5 2.0 2.5 3.0 3.5 4.0 4.5 5.0];
figure

title('fontsize{16}\bf Using the same Y axis');
```

Figure 1: y1 and y2 are plotted against x using the same y axis.
2. (5 marks) Suppose we plot the following figure using the incomplete MatLab code below. Note the data plotted here is the same as in the question above!!!

![Figure 2: y1 and y2 are plotted against x using the different y axes.](image)

```matlab
x=linspace(0,10,11);
y1=[0.1 0.2 0.3 0.2 0.1 0.0 -0.1 -0.2 -0.3 -0.2 -0.1];
y2=[0.0 0.5 1.0 1.5 2.0 2.5 3.0 3.5 4.0 4.5 5.0];
figure

title('fontsize{16}\bf Using the different Y axes');
```

3. (5 marks) Suppose we plot the following figure using the incomplete MatLab code below.

```matlab
x=rand(5000,1,'double');
figure

title('\fontsize{16}\bf Histogram of normal random numbers');
```

Figure 3: 5000 random normal values are histogram against 101 bins.
4. (5 marks) Suppose we plot the following errorbar using the incomplete MatLab code below.

```matlab
x=linspace(-4,4,9);
y=[0.0 0.5 1.0 1.5 2.0 2.5 3.0 3.5 4.0];
U=y+abs(randn(1,9));
L=y-abs(randn(1,9));
figure
hold on
plot(x,y,’linewidth’,2.0,’color’,’red’);
hold off
title(’\fontsize{16}\bf Errorbar with random min and max bounds’);
```

Figure 4: Errorbar with minimum and maximum bars.
5. (5 marks) Suppose we plot the following quiver plot using the incomplete MatLab code below.

```matlab
x=[0.0 0.5 1.0 1.5 2.0 2.5 3.0 3.5 4.0 4.5 5.0];
y=[0.0 0.5 1.0 1.5 2.0 2.5 3.0 3.5 4.0 4.5 5.0];
u=[0.1 0.2 0.3 0.2 0.1 0.0 -0.1 -0.2 -0.3 -0.2 -0.1];
v=[-0.1 -0.2 -0.3 -0.2 -0.1 0.0 0.1 0.2 0.3 0.2 0.1];
[X,Y]=meshgrid(x,y);
[U,V]=meshgrid(u,v);
figure

title(’\fontsize{16}\bf 2D Quiver Field’);
```

Figure 5: The u,v velocities at the meshgrid location of x and y values.
(5) (25 marks) Consider the following 3D graphs and the incomplete MatLab code used to generate them. Fill in the single missing MatLab statement (after the `figure` statement) in each case.

1. (5 marks) Suppose we plot the following slice figure using the incomplete MatLab code below.

```
x=linspace(-5,5,11);
y=-10:10;
z=-5:5;
[X,Y,Z]=meshgrid(x,y,z);
V=sqrt(X.^2+Y.^2+Z.^2);
figure
grid on; box on;
xlabel('X axis');
ylabel('Y axis');
zlabel('Z axis');
title('ontsize{16}f 3D Slice Plot');
```

Figure 6: 3D slice image
2. (5 marks) Suppose we plot the following helix figure using the incomplete MatLab code below.

```matlab
z=linspace(0,10*pi,1000);
c=cos(z);
s=sin(z);
figure

grid on
xlabel('cos(z)')
ylabel('sin(z)')
zlabel('z')
title('\fontsize{16}\bf 3D Plot of Helix');
```

Figure 7: 3D helix image.
3. (5 marks) Suppose we plot the following `ezsurf` figure using the incomplete MatLab code below.

```
fct=['3*(1-x).^2.*exp(-(x.^2)-(y+1).^2)' ...
     '-10*(x/5-x.^3-y.^5).*exp(-x.^2-y.^2)' ...
     '-1/3*exp(-(x+1).^2-y.^2)';
figure

title('\fontsize{15}\bf ezsurf of fct');
```

Figure 8: 3D ezsurf plot (of the peaks function!!!).
4. (5 marks) Suppose we plot the following `ezcontour` figure using the incomplete MatLab code below.

```
fct=['3*(1-x).^2.*exp(-(x.^2)-(y+1).^2)'
     '-10*(x/5-x.^3-y.^5).*exp(-x.^2-y.^2)'
     '-1/3*exp(-(x+1).^2-y.^2)';
figure

title('\fontsize{15}\bf ezcontour of fct');
```

Figure 9: 3D ezcontour plot (of the peaks function!!!).
5. (5 marks) Suppose we plot the following sinc (jinc) function figure using the incomplete MatLab code below.

![Sinc Function](image)

```matlab
[X,Y]=meshgrid(-10:0.5:10);
R=sqrt(X.^2+Y.^2)+eps;
Z=sin(R)./R;
figure

title('\textbf{Sinc Function}');
```
(6) (20 marks) This question is also on 2D and 3D plotting and the use of Handle Graphics to change the appearance of graphs.

1. (2 marks) What does the \texttt{rotate3D} button in the toolbar let you do to a 3D image?

2. (2 marks) Consider the plot of a 2D graph using \texttt{plot(x,y)}, where \texttt{x} and \texttt{y} are appropriately set vectors. How would you change the linewidth of the graph to be 2.0?

3. (2 marks) Consider the plot of a 2D graph using \texttt{plot(x,y)}, where \texttt{x} and \texttt{y} are appropriately set vectors. How would you change the colour of the graph to be red?

4. (4 marks) Suppose you have successfully written 4 MatLab functions, \texttt{G1(X,Y,Z)}, \texttt{G2(X,Y,Z)}, \texttt{G3(X,Y,Z)} and \texttt{G4(X,Y,Z)} to plot 4 3D graphs. \texttt{X}, \texttt{Y} and \texttt{Z} have been correctly computed elsewhere. How would you plot these 4 graphs as a single plot using \texttt{subplot}? Do not label the subplots with titles.
5. (4 marks) Suppose you wish to visually compare two 3D plots. The 1st plot has $x$, $y$ and $z$ ranges of $[x_{1\text{min}}, x_{1\text{max}}, y_{1\text{min}}, y_{1\text{max}}, z_{1\text{min}}, z_{1\text{max}}]$ while the 2nd plot has $x$, $y$ and $z$ ranges of $[x_{2\text{min}}, x_{2\text{max}}, y_{2\text{min}}, y_{2\text{max}}, z_{2\text{min}}, z_{2\text{max}}]$. What axis statement would you use to ensure both plots have the same $x$, $y$ and $z$ ranges.

6. (3 marks) One way to perform an animation is to plot the changing figures on top of each other without a hold on. However, if the figures are plotted too fast we need to slow down the rate at which figures are drawn on top of each other. How can we do this?

7. (3 marks) If, on the other hand, suppose the drawing of each figure is too slow (even without a pause) to produce a realistic animation. What can we do?
(7) (15 marks) This question is about doing computations on arrays with some `nans` in them. Give any computational results as fractions. Consider the 1D row array:

\[ x = [4 \ 5 \ 9 \ \text{nan} \ 6 \ 3 \ 4 \ \text{nan} \ 2 \ 8 \ 1]; \]

1. (1.5 marks) What is the value of \( \text{isnan}(x) \)?

2. (1.5 marks) What is the value of \( \sim \text{isnan}(x) \)?

3. (2 marks) What is the value of \( \text{mean}(\text{isnan}(x)) \)?

4. (2 marks) What is the value of \( \text{mean}(\sim \text{isnan}(x)) \)?

5. (4 marks) What is the value of \( \text{mean}(x(\text{isnan}(x))) \)?

6. (4 marks) What is the value of \( \text{mean}(x(\sim \text{isnan}(x))) \)?
(8) (30 marks) The question concerns the Matlab symbolic arithmetic toolbox.

1. (5 marks) Consider a function \( f(x, y, z) = e^x \sin(y) \cos(z) \). Write a MatLab code segment to symbolically evaluate this integral:

\[
\int \int \int f(x, y, z) \, dx \, dy \, dz.
\]

2. (5 marks) Write MatLab code to numerically evaluate this integral:

\[
\int_{-2}^{2} \int_{-3}^{3} \int_{-4}^{4} f(x, y, z) \, dx \, dy \, dz.
\]

3. (5 marks) Consider a function \( f(x, y, z) = e^x \sin(y) \cos(y) \). Write a MatLab code segment to symbolically evaluate the derivative:

\[
\frac{\partial^3}{\partial x \partial y \partial z} f(x, y, z)
\]
4. (5 marks) Write MatLab code to numerically evaluate this derivative:

\[ \frac{\partial^3}{\partial x \partial y \partial z} f(x, y, z) \]

at \( x = 1, \ y = 2 \) and \( z = 3 \).

5. (10 marks) Write a MatLab code segment to symbolically solve the \( 3 \times 3 \) linear system of equations:

\[
\begin{bmatrix}
  a & b & c \\
  d & e & f \\
  g & h & i \\
\end{bmatrix}
\begin{bmatrix}
  x \\
  y \\
  z \\
\end{bmatrix}
=
\begin{bmatrix}
  r \\
  s \\
  t \\
\end{bmatrix}
\]

which can be written more concisely as \( AX = B \).
(9) (30 marks) Consider the 25 $x$ and $y$ values plotted in the graph below. The following MatLab code segment produced this plot:

```
x=linspace(1,10,25);
y=linspace(1,10,25)+randn(1,25,'double');
plot(x,y,'*k');
```

Answer the following questions:

1. (10 marks) Fill in the incomplete MatLab code continued after the above MatLab code segment that produces the following line fit ($1^{st}$ order polynomial fit):

```
x=linspace(1,10,25);
y=linspace(1,10,25)+randn(1,25,'double');
plot(x,y,'*k');
```
hold on
xp=linspace(1,10,250);

2. (10 marks) What are the two problems most commonly associated with high order polynomial fits to datasets?

(1)

(2)

3. (5 marks) What is the difference between an inlier and an outlier?

4. (5 marks) What effect can an outlier have on the fit of a line (or, indeed, the fit of any polynomial) to the data?
(10) (10 marks) Consider edge detection as done by MatLab in Lecture 19 and Lab 11.

1. (4 marks) What is an advantage of using a white background with black edgels over a black background with white edgels?

2. (6 marks) Consider the colour edge detection done for Lab 11 (the last lab).

   (a) (2 marks) What does a red edgel mean?

   (b) (2 marks) What does a yellow edgel mean (yellow is made by combining red and green light in equal amounts)?

   (c) (2 marks) What does a white edgel mean?
