1. What sort of programs are you most interested in working on after you graduate?

2. What programming languages do you generally prefer to work in? For development work? For quick prototyping?

3. What kind of project work are you doing in other classes that you might want to know more about how to try to assure that the results are high quality?

4. Of the topics mentioned so far in class or that you have encountered elsewhere related to testing and quality assurance, which ones would you most like to know more about?
