

Mysteries of Newport Forest

Dear Friends,

Don't be surprised if you hear strains of "The Twilight Zone" playing in the background as you examine the latest production from trail Cam #1. It has a relationship of some kind with Mystery #3, the Unidentified Flaming Object in that lights are involved and, once again, the metre-post has made a double image, as if the ground (or camera) were shaking.

To me the bright polygonal areas look like what photo-analysts call specular reflections -- but of what I couldn't say. Prize for best explanation: an attractive, stand-up model of the Creature from the Black Lagoon.

Cheers & Good luck!

Kee

PS: too early for fireflies . . .
