THIS IS A TRIGGER

March is Epilepsy Awareness Month, and March 26th is Purple Day for Epilepsy.

Having epilepsy means that everyday moments like watching TV can cause you to have a seizure. It is one of the most common chronic neurological disorders, and 1 in 100 Canadians are diagnosed with it. In fact, 1 in 10 people will have a seizure in their lifetime.

Show your support on March 26th by wearing purple and raising awareness about epilepsy.

EPILEPSY

1-866-EPILEPSY
www.epilepsysupport.ca
690 Hale Street, London, Ontario, N5W 1H4

Epilepsy Awareness Month: March

THE PURPLE DAY FOR EPILEPSY: MARCH 26TH

WHAT IS EPILEPSY?
Epilepsy is a common brain disorder characterized by recurrent seizures. Approximately 1 in 100 Canadians have epilepsy. An estimated one percent of the general population has epilepsy.

WHAT IS A SEIZURE?
A seizure is a brief disruption in normal brain activity that interferes with brain function. Approximately 1 in 10 people will have a seizure in their lifetime.

CAUSES:

1. Genetic causes
2. Birth injury
3. Developmental disorder
4. Brain Trauma
5. Infection
6. Brain tumour
7. Stroke
8. Substance abuse

HOW IS EPILEPSY TREATED?

1. Medication (The most common treatment type)
2. Brain Surgery
3. Nerve and Brain Stimulators
4. Ketogenic Diet
5. Complementary Therapies

SEVERAL FIRST AIDS:

1. Keep Calm.
2. Protect from further injury.
3. Do not restrain the person.
4. After the seizure subsides, roll the person on their side.
5. If a seizure lasts longer than 5 minutes, or repeats without full recovery, you should seek medical assistance immediately.
6. Talk gently to the person.

MARCH IS EPILEPSY AWARENESS MONTH
PURPLE DAY IS MARCH 26

MY SEIZURES ARE PROOF I HAVE A BRAIN

- Epilepsy is a disorder, not a disease; it is not contagious
- Each day in Canada, an average of 42 people learn that they have epilepsy
- About 60% of new patients are young children and senior citizens

GET SEIZURE SMART TO PROVE YOU CAN USE YOURS

Epilepsy Support Centre:

- Supports people with epilepsy and their families
- Raises awareness, dispels myths and breaks down the stigma of epilepsy
- Educates communities about epilepsy and seizure first aid

families affected by Epilepsy

72

epilepsy
noun

A neurological disorder marked by sudden recurrent episodes of sensory disturbance, loss of consciousness, or convulsions, associated with abnormal electrical activity in the brain.

Examples in a sentence:
"Epilepsy is a disorder, not a disease; it is not contagious"
"1 in 100 Canadians are diagnosed with epilepsy"
"Each day in Canada, an average of 42 people learn that they have epilepsy"

www.epilepsysupport.ca

Due to the stigma surrounding epilepsy and the prevalence with which society has historically treated people with epilepsy, living with the disorder is often more painful than the treatment.

March is Epilepsy Awareness Month

Epilepsy is a disorder, not a disease; it is not contagious. **1 in 10 people will have a seizure in their lifetime**

In 50 - 60% of cases, the cause of epilepsy is unknown. In the remainder, the following causes are most common:

- Head trauma of any type. The more severe the injury, the greater the chance of developing epilepsy.
- injury, infection, or systemic illness of the mother during pregnancy
- aftermath of infection (meningitis, viral encephalitis)
- poisoning, from substance abuse or alcoholism
- Brain tumor and stroke

Brain surgery is recommended only when medication fails and when the seizures are confined to one area of the brain where brain tissue can be safely removed without damaging personality or function.

Approximately 1 in 26 people will develop epilepsy at some point in time. **Each day in Canada, an average of 42 people learn they have epilepsy.**

My seizures are proof I have a brain. Get seizure smart to prove you can use yours!

Epilepsy is the fourth most common neurological disorder in Canada. *There are about 20 different types of seizures and about 40 different types of epilepsy.*

The major form of treatment is long-term drug therapy. Drugs are not a cure and can have numerous side effects.

Purple Day for Epilepsy **1 in 100 Canadians are diagnosed with epilepsy**

March 26

Each year an average of 1,500 people learn they have epilepsy. 44% are diagnosed before the age of 5, 55% before the age of 10, 75-85% before age 18, and 1% of children will have recurrent seizures before age 14. 1.2% are over the age of 40. This means that about 60% of new patients are young children and senior citizens.

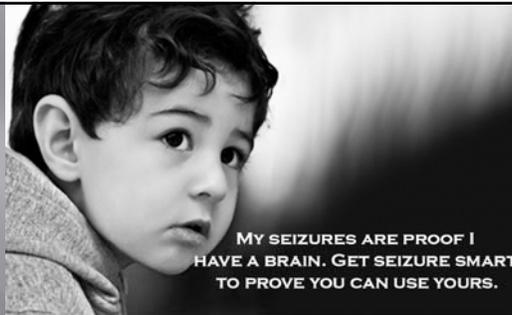

Events that may trigger a seizure include:

- Stress, such as anger, worry, or fear
- Sleep, heat, and alcohol
- Fear and/or humiliation
- Blood medication
- Fluorouracil
- Poor nutrition
- Skipping meals
- Lack of sleep
- Stress
