

# High-performance computing and symbolic computation

Marc Moreno Maza

Ontario Research Center for Computer Algebra (ORCCA)  
University of Western Ontario, Canada

6 September 2019

# Research themes and team members

- **Symbolic computation**: computing exact solutions of algebraic problems on computers with applications to sciences and engineering.
- **High-performance computing**: making best use of modern computer architectures, in particular hardware accelerators (multi-cores GPUs)

## Current students

**PDF**: Robert Moir

**PhD**: Alex Brandt, Ali Asadi, Davood Mohajerani, Mahsa Kazemi, Mehdi Samadieh, , Lin-Xiao Wang

**MSc**: Delaram TalaAshrafi, Amha Tsegaye, Peter Valovcik

## Alumni

Parisa Alvandi ( **U. Waterloo** , Canada) Moshin Ali ( **ANU** , Australia) Masoud Ataei ( **IBM Canada** ) Jinlong Cai ( **Oracle** , USA) Changbo Chen ( **Chinese Acad. of Sc.** ) Xiaohui Chen ( **Huawei** , China) Egor Chesako ( **Microsoft** , USA) Svyatoslav Covanov ( **U. # Solving polynomial systems symbolically

```

R := PolynomialRing([x, y, z]); F := [5*x^2 + 2*x*z^2 + 5*y^6 + 15*y^4 + 5*z^2 - 15*y^5 - 5*y^3];
      polynomial_ring
      [5 x^2 + 2 x z^2 + 5 y^6 + 15 y^4 + 5 z^2 - 15 y^5 - 5 y^3]
RealTriangularize(F, R, output = record);
{
  5 x^2 + 2 z^2 x + 5 y^6 + 15 y^4 - 5 y^3 - 15 y^5 + 5 z^2 = 0
  25 y^6 - 75 y^5 + 75 y^4 - z^4 - 25 y^3 + 25 z^2 < 0
}
{
  5 x + z^2 = 0
  25 y^6 - 75 y^5 + 75 y^4 - 25 y^3 - z^4 + 25 z^2 = 0
  64 z^4 - 1600 z^2 + 25 > 0
  z ≠ 0
  z - 5 ≠ 0
  z + 5 ≠ 0
}
{
  x + 5 = 0
  y = 0
  z - 5 = 0
},
{
  x + 5 = 0
  y - 1 = 0
  z + 5 = 0
},
{
  x + 5 = 0
  y = 0
  z + 5 = 0
},
{
  5 x + z^2 = 0
  2 y - 1 = 0
  64 z^4 - 1600 z^2 + 25 = 0
}

```

Figure: The *RegularChains* solver designed in our UWO lab is at the heart of **Maple**, which has about 5,000,000 licences world-wide.

## New Maplesoft project for Toyota leverages symbolic computation in control systems engineering

Maplesoft February 4, 2013 [Related Products](#)  
[Any Maple](#)  
[Any MapleSim](#)

**Follows development of highly successful model simplification tools using Maplesoft technology**

Waterloo, Canada; 4 February 2013: Maplesoft today announced that its ongoing partnership with Toyota Motor Engineering & Manufacturing North America, Inc. has been expanded to include a new project. This project will see the leading car manufacturer use new symbolic computation methods in robust control design, with a strong focus on methods for linear, nonlinear, and parametric systems. [Maplesoft technology](#) is rooted in strong [symbolic computation techniques](#), making it an appropriate choice for Toyota.

The main goal of the new Symbolic Control project is ground-breaking research that leads to the implementation of symbolic design and analysis methods for linear, nonlinear, and parametric robust control. The new research will allow developers to consider system nonlinearities, modeling inaccuracies, and parametric uncertainties in the design process. As a result, Toyota expects to shorten development time while maintaining high quality results.

This new project follows the [completion of another successful Maplesoft project for Toyota](#), which saw high-end research and implementation of new methods for model simplification and preprocessing of high level acausal dynamical models. Simplification enables the conversion of high-level descriptive models into smaller executable models for faster execution and provides for better analysis, higher efficiency, and more accurate simulation. Model simplification allows engineers to focus on describing the physical properties of the system in an equation-based manner. It also makes use of the power of mathematical equations to better manage models, so engineers obtain the optimal results faster.

## High-performance computing: parallel program translation

```
int main(){
  int sum_a=0, sum_b=0;
  int a[ 5 ] = {0,1,2,3,4};
  int b[ 5 ] = {0,1,2,3,4};
  #pragma omp parallel
  {
    #pragma omp sections
    {
      #pragma omp section
      {
        for(int i=0; i<5; i++)
          sum_a += a[ i ];
      }
      #pragma omp section
      {
        for(int i=0; i<5; i++)
          sum_b += b[ i ];
      } } }
}
```

```
int main()
{
  int sum_a=0, sum_b=0;
  int a[ 5 ] = {0,1,2,3,4};
  int b[ 5 ] = {0,1,2,3,4};

  meta_fork shared(sum_a){
    for(int i=0; i<5; i++)
      sum_a += a[ i ];
  }

  meta_fork shared(sum_b){
    for(int i=0; i<5; i++)
      sum_b += b[ i ];
  }

  meta_join;
}
```

```
void fork_func0(int* sum_a,int* a)
{
  for(int i=0; i<5; i++)
    (*sum_a) += a[ i ];
}

void fork_func1(int* sum_b,int* b)
{
  for(int i=0; i<5; i++)
    (*sum_b) += b[ i ];
}

int main()
{
  int sum_a=0, sum_b=0;
  int a[ 5 ] = {0,1,2,3,4};
  int b[ 5 ] = {0,1,2,3,4};
  cilk_spawn fork_func0(&sum_a,a);
  cilk_spawn fork_func1(&sum_b,b);
  cilk_sync;
}
```

Our lab develops a compilation platform for translating parallel programs from one language to another; above we translate from OpenMP to CilkPlus through MetaFork. This project is supported by **IBM Canada**.

# High-performance computing: automatic parallelization

## Serial dense univariate polynomial multiplication

```
for(i=0; i<=n; i++){
  for(j=0; j<=n; j++){
    c[i+j] += a[i] * b[j];
  }
}
```

Dependence analysis suggests to set  $t(i, j) = n - j$  and  $p(i, j) = i + j$ . Then, the work is decomposed into *blocks* having good data locality.

## GPU-like multi-threaded dense univariate polynomial multiplication

```
meta_for (b=0; b<= 2 n / B; b++) {
  for (u=0; u<=min(B-1, 2*n - B * b); u++) {
    p = b * B + u;
    for (t=max(0,n-p); t<=min(n,2*n-p) ;t++)
      c[p] = c[p] + a[t+p-n] * b[n-t];
  }
}
```

<i>pc</i>	0	1	2	3	4	5	6
<i>rc</i>	0	0	1	1	0	0	1
<i>oc</i>	0	1	0	1	0	1	0
<i>bc</i>	0	0	1	1	2	2	3
<i>sc</i>	0	0	0	0	1	1	1

We use symbolic computation to automatically translate serial programs to GPU-like programs.

## Courses

### CS 6652: Symbolic solvers (not this year)

- Driving application: automatic parallelization
- Related topics: scientific computing, program analysis, computer algebra, linear & non-linear optimization
- Objects of study: exact representation of real numbers on computers, real or integer solutions of (parametric) polynomial systems
- languages: Maple, C/C++.

### CS 9635/4402: Parallel Computing (this year)

- multi-core, GPGPU, hierarchical memory,
- fork-join concurrency, SIMD, message passing
- parallel algorithms: design and complexity analysis
- scheduling (work-stealing scheduler) and synchronization
- languages: Julia, CilkPlus, CUDA, MPI.
